Gastric Electrical Stimulation (GES)

2026 AMBULATORY SURGICAL CENTER REFERENCE GUIDE

Description

Enterra® Therapy is the first and only device designed to reduce nausea and vomiting associated with diabetic or idiopathic gastroparesis through gastric electrical stimulation (GES). The implant procedure is a minimally invasive, laparoscopic or robotic surgical procedure, where a neurostimulator is placed in subcutaneous tissue (typically in the abdomen) and the leads are placed on the serosal surface of the stomach's greater curvature.
To learn more about the procedure visit www.enterramedical.com.

ICD-10-CM diagnosis coding

Diagnosis codes are used by both physicians and facilities to document the indication for the procedure. Consult an ICD-10-CM manual for a complete list of diagnosis codes and verify appropriate ICD-10 diagnosis codes, including those for any underlying condition(s).

Commonly Used ICD-10-CM Diagnosis Codes

ICD-10-CM Code[1]	Descriptor
K31.84	Gastroparesis
Z45.42	Encounter for adjustment and management of neurostimulator

Device reporting

HCPCS Level II device codes are not required for Medicare ASC reporting. However, some non-Medicare payers may recognize these codes. The HCPCS codes listed below may be appropriate for reporting to those payers.

HCPCS Level II Device Crosswalk

Device Category	Device Description	Model Number(s)	HCPCS C-Code(s)[2]	HCPCS L-Code(s)[2]
Implantable Pulse Generator (IPG)	Enterra II Neurostimulator	37800	C1767	L8679
Stimulation Lead	Enterra Unipolar Lead	4351-35	C1778	L8680
Programmer	Programming Device & Card	8840, 8870	C1787	L8681

Ambulatory surgical center coding and payment

CPT® Code[3]	Description	Status Indicator	Medicare National Average Payment[4]	Private/ Commercial	Multiple Procedure Discounting[5]
Insertion/Battery Replacement					
64590	Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver	J8	$16,244	Contractual	N
43647	Laparoscopy, surgical; implantation orreplacement of gastric neurostimulator electrodes, antrum	J8	$9,997	Contractual	N
43235	Esophagogastroduodenoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure).	A2	$498	Contractual	Y
95980	Electronic analysis of implanted neurostimulator pulse generator system (e.g., rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter, intraoperative, with programming	N/A	N/A	Contractual	N/A
C1767	Generator, neurostimulator (implantable), non-rechargeable	N/A	Note: ASCs do not report HCPCS II device codes	Report with Revenue Code 278 and device charges	N/A
C1778	Lead, neurostimulator (implantable)				
Revision or Removal					
64595	Revision or removal of peripheral, sacral, or gastric neurostimulator pulse generator or receiver with detachable connection to electrode array	A2	$2,003	Contractual	Y
43648	Laparoscopy, surgical; revision or removal of gastric neurostimulator electrodes, antrum	G2	$5,120	Contractual	Y

Status Indicators for Ambulatory Surgical Centers

Status Indicator[6]	Description
J8	Device intensive procedure; paid at adjusted rate
G2	Non-office based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight.
A2	Surgical Procedure on ASC list in CY 2007; payment based on OPPS relative payment weight

If you have reimbursement questions regarding the Enterra Therapy Procedure, please contact us at reimbursement@enterramedical.com or 1-855-768-3772.

DISCLAIMER
The reimbursement information provided by Enterra Medical is for informational purposes only and does not constitute legal or reimbursement advice. Enterra Medical makes no guarantees regarding its accuracy, completeness, or applicability to any patient and disclaims liability for actions taken based on this information. Providers are responsible for accurate coding and reimbursement submissions and should consult payers, contracts, reimbursement specialists, or legal counsel for guidance, as laws and policies frequently change. Applicable FARS/HHSARS apply. Fee schedules, relative value units, conversion factors and/or related components aren't assigned by the AMA, aren't part of CPT, and the AMA isn't recommending their use. The AMA doesn't directly or indirectly practice medicine or dispense medical services. The AMA assumes no liability for data contained or not contained herein.

Important Safety Information
Enterra® Therapy for treatment of chronic, resistant to medication nausea and vomiting associated with gastroparesis caused by diabetes or an unknown origin in patients aged 18 to 70 years: patients should always discuss potential risks and benefits of the device with their physician. **Indications for Use:** The Enterra Therapy System for gastric electrical stimulation is indicated for use in the treatment of chronic, intractable (drug refractory) nausea and vomiting associated with gastroparesis caused by diabetes or an unknown origin in patients aged 18 to 70 years. **Contraindications:** The Enterra Therapy System is not intended for patients whom the physician determines are not candidates for surgical procedures and/or anesthesia due to physical or mental health conditions. You cannot have diathermy (deep heat treatment from electromagnetic energy) if you have an Enterra device. **Warnings/Precautions/Adverse Events:** This system has not been evaluated for pregnant women, for use in patients under the age of 18, or patients over the age of 70. The system may be affected by or adversely affect cardiac devices. Strong sources of electromagnetic interference (EMI) such as from electrocautery, defibrillation/cardioversion, therapeutic ultrasound, radiofrequency (RF)/microwave ablation, or MRI, can result in serious injury, system damage, or operational changes to the system. EMI, postural changes, or other activities may cause shocking or jolting sensations.

MR The Enterra II System is MR Conditional. This means that patients with the Enterra II System can safely have MRI examinations of some body parts under certain conditions. The conditions for MRI scans will vary with the type of MRI coil. Obtain the latest MRI guidelines by referring to the manuals at www.enterramedical.com/hcp/manuals. Patients on anticoagulation therapy may be at a greater risk for post-operative complications. The use of non-Enterra Medical components with this system may result in damage to Enterra Medical components, loss of therapy, or patient injury. There is the possibility of an allergic or immune system response to the implanted materials. When possible, a physician is to identify and treat any infections prior to surgery. Infections at the implant site almost always require the surgical removal of the implanted system. The lead can become entangled with the bowel or perforate your stomach and cause life-threatening blockage or infections that require immediate medical attention and may require surgery. Patients should avoid activities that may put undue stress on the implanted system components (activities that include sudden, excessive, or repetitive bending, twisting, bouncing, or stretching that can cause component fracture or dislodgement). Adverse events related to the therapy, device, or procedure can include: infection, pain at the surgery site, device components may wear through the skin, bruising at the neurostimulator site, bleeding, loss of therapeutic effect, undesirable change in stimulation (described as a jolting, shocking, or burning sensation), gastrointestinal symptoms and gastrointestinal complications (in that the lead may perforate your stomach or device components may become entangled with or obstruct other internal organs, requiring surgery). The system could stop because of battery depletion or mechanical or electrical problems. Any of these situations may require additional surgery or cause your symptoms to return.

Humanitarian Device: Authorized by Federal law for use in the treatment of chronic intractable (drug refractory) nausea and vomiting secondary to gastroparesis of diabetic or idiopathic etiology in patients aged 18 to 70 years. The effectiveness of this device for this use has not been demonstrated. For further information, please contact Enterra Medical at info@enterramedical.com. USA Rx only.
